Acknowledgement

One of the most exciting parts of doing science is that one gets to meet a lot of interesting people. Over the last four years, I had the privilege to work in four research groups. Consequently, I am indebted to many people, who I would like to thank in this acknowledgement.

I would like to start with Theoretical Research in Evolutionary Life Sciences (previously known as the Theoretical Biology Group), a.k.a. TRÊS, which formed my home-base over the last years. Working in TRÊS has been a great experience. There are many cool projects and it is a fun to hang out with colleagues. I particularly want to thank Andrés Quiñones, Alex Ivanov and Piet van den Berg, who were part of my PhD cohort. In addition, I would like to thank (in random order) Ido Pen, Lucas Molleman, Aniek Ivens, David Ekkers, Jianlei Zhang, Joke Bakker, Thijs Janzen, Marina Rillo, Sander van Doorn, Franjo Weissing (see also below), Rampal Etienne, Adriana Alzate, Cyrus Mallon, Ivan Puga-Gonzalez, Stefany Moreno, Thomas Rösli, Boris Kramer, Tsukushi Kamiya, Vivek Sridhar, Leonardo Oña, Albertas Janulevicius, Alberto Nakauma, Freek de Haas, Nancy Obeng, Kuke Bijlsma, Sebastian Baldauf and Ingeborg Jansen. You have given me an unforgettable time in TRÊS. I also want to give a special thanks to Jennah Dharamshi. I really enjoyed our collaboration and got infected by your interests in bioinformatics.

I am also indebted to the Molecular Genetics Group in Groningen. Without any previous laboratory experience, they were willing to host me during the first year. I particularly want to thank Ákos Kovács and Oscar Kuipers. Ákos Kovács has introduced me to the lab. I appreciate your patience during my early days of pipetting and want to thank you for training me in the lab. I also want to thank Oscar Kuipers for supporting me throughout my PhD. I really like your open-minded vision on science and your broad interests. This is also reflected by the nice group of students that is hosted in your lab, including Lieke van Gijtenbeek, Sjoerd van der Meulen, Tonia Krawczyk, Ruud Detert, Marielle van den Esker, Matthijs Elema, Jeroen Siebring and Anne-Stephanie Rueff. Many thanks for making my stay in the Molecular Genetics Group so enjoyable. Finally, I would like to thank Ana Solopova for our exciting collaboration on the diauxic shift in *Lactococcus lactis*. Our collaboration started by coincidentally meeting each other in the microscopy room. I learned so much from our discussions and enjoyed watching your beautiful time lapse movies.

The second part of my experimental research is done in the Kolter Lab. The Kolter Lab stands out because of the wonderful atmosphere that was present in the group, which I believe was largely the consequence of two persons: Roberto Kolter and Hera Vlamakis. Roberto, thanks for supporting my stay in your lab. Even before I did any laboratory research, you encouraged me to come over and work on *Bacillus subtilis*. I had a wonderful time and learned a lot, luckily not only about science, but also about wines, food, Maine and Spain. The lab retreat in Maine was a highlight of 2013. Hera, I also want to thank you. You are such a nice person. I really enjoyed our hours in front of the

flow cytometer and want to thank you for all the help. I also want to thank the other lab members and people I met in and around the lab: Mechas Zambrano, Nick Lyons (thanks for helping me around in the lab), Ben Niu (thanks for teaching me so much about China), Robe Balbontín (thanks for the great discussions on scientific ethics), Matthew Traxler (thanks for introducing me to one of the coolest bugs around), Gleb Pishchany, Pascal Beauregard, Conrado Adler, Ana Hael, Sarah Wacker, Diana Morales (thanks for all the laughs), Marta Neto (thanks for the great quotes), Nelly Henry, Cristina Landeta (Beckwith lab) and Paula Montero Llopis (thanks for all the help with the microscope; Rudner Lab). Finally, I would like to thank Rita Pessotti, who besides being a lab mate also turned out to be a house mate. I really enjoyed hanging around with you.

During my stay in the United States I also joined the Program of Evolutionary Dynamics, a.k.a. PED. I first joined the group during my MSc and had the privilege to come back during my PhD. Two people were particularly important for my time at PED: Corina Tarnita and Martin Nowak. Corina thanks for our many discussions. I really enjoyed your unlimited curiosity and I am convinced we will stay in touch in the coming years. Martin I want to thank you for giving me the opportunity to come to your lab. I am happy that you have given me the freedom to design my own research projects and supported my collaboration with the Kolter lab. I am looking forward to collaborate in the future. Then I would like to thank all people at PED, in particular Alison Hill, Feng Fu, Ivana Božić, Oliver Hauser, Emily Hauser, Matthijs van Veelen and Stefany Moreno (again!).

I also want to thank a number of people that were not directly involved in my PhD work. I want to thank Patricia Beldade and Paulien Hogweg for their help during my studies. I want to thank Pilar Eliana Puentes Téllez and Stephanie Grizard for the nice discussions. I want to thank Andrés Quiñones (again; there is no possible way I can thank you enough Mr. Quiñones!), Hernán Morales, Alex Ivanov (again!), Adriana Alzate (again!) for the great time during the MSc program. I also want to thank Fons van der Plas, Lilian Verweij, Linda van Zomeren, Hervé Courthion, Angelica Cuevas, Alex Daniilidis, Insa Ruchay, Philip Zupancic, Johan Franzén, Kirill, Damian Ortiz, Joel Schedin, Marcel Tücking, the Talstraße WG, Helene and Clemens for tolerating me as a friend and helping me around. I also want to give a special thanks to Adriana Alzate and Stefany Moreno, my paranims, two crazy Colombian women. Adriana is crazy about fruit juices, something I found out in the first five seconds after meeting her. Thanks Adriana for being such a great friend. Stefany is crazy about Hello Kitty and Tequila Sunrise. Stefany, thanks for your companionship in all the laboratories I went and go to. I am looking forward to work together in the coming years.

My biggest thanks for the work presented in this thesis goes to Franjo Weissing. Franjo, thanks for introducing me to the field of theoretical biology during the first year of my

studies. Your course on biomathematics has triggered my interests in science. You have been a great mentor ever since. Not only do I want to thank you for sharing your unique view on science, but also for being a unique mentor. You have supported me whenever needed, allowed me to design my own research projects and encouraged me to go abroad. I am especially thankful for your personal support. The last years I have spent a large part of my time in Freiburg. This has never been a problem to you. I am sure we stay in touch and we will see each other at many of the evolutionary conferences that are still to come. Thanks!

Tot slot wil ik nog een aantal bedankjes in het Nederlands doen. Ik wil mijn familie bedanken. Mama en papa bedankt voor al jullie steun en de vele ritjes van en naar Groningen. John bedankt voor je oneindige interesse in de wetenschap. Jouw lust om te leren is aanstekelijk. Marysia bedankt voor al je gezelligheid. Karianka bedankt voor alles.

En natuurlijk Louisa, bedankt voor de talloze mooie dagen van Nile tot nu!
